

PRATIK MESHAM

Senior Unity Game Developer | Technical Game Designer | Content Writer

pratikls007@gmail.com | 9479052332 | [LinkedIn](#) | [Portfolio](#) | [YouTube](#)

SUMMARY

Senior Unity Game Developer with 6+ years of experience building multiplayer, mobile and PC games. Strong background in gameplay programming, Photon networking, backend integration, live operations and game systems. Experienced in designing and owning gameplay, progression, economy and player-feedback systems from implementation through release.

SKILLS

Game Development: Unity, C#, Gameplay Programming, Game Architecture, OOP, SOLID, Design Patterns, State Machines

Multiplayer & Backend: Photon Fusion 2, Photon, Netcode, PlayFab, Firebase, REST APIs, Networking, Multiplayer Architecture

Game Design: Gameplay Systems, Combat Design, Progression, Economy, Game Balancing, Feedback Systems, Level Design

Platforms & Integration: Android, iOS, PC/Steam, WebGL, Payments, Ads, SDK Integration, APIs

Technical & Production: Optimization, Profiling, Physics, Animation Systems, UI/UX, Asset Bundling, Analytics, Live Operations, Git, Debugging

EXPERIENCE

MunchzTechnoz

Senior Game Developer / Game Designer • Full-time | Dec 2025 – Present

- Working on multiple commercial games, including a multiplayer wrestling/fighting title associated with a professional wrestling federation and a roguelike top-down action game.
- Developing real-time multiplayer systems using Photon Fusion, alongside gameplay programming, systems design and Game Design Documentation.
- Integrating SDKs, APIs and real-time purchase systems, while contributing to the development and release of a Steam title.
- Handling Asset Bundling, Google Play integrations and platform-specific technical requirements for larger-scale game projects.

Capital Rush

Senior Game Programmer • Full-time | Apr 2023 – Nov 2025

- Developed and maintained multiplayer gameplay and backend systems for a real-time trading game using Photon, PlayFab and Firebase.
- Designed core gameplay systems including player economy, progression, feedback loops and game mechanics, with a focus on player engagement and game balance.
- Implemented payment integrations and analytics systems, supporting monetization, player-data tracking and live-game operations.
- Managed testing, live operations and performance optimization, while coordinating development and ensuring stable gameplay and feature delivery.

Woodiwen Technologies

Unity Game Developer / Project Lead • Full-time | Dec 2022 – Mar 2023

- Led project coordination and development across multiple PvP card and casino games, managing feature implementation and delivery.

- Rapidly prototyped gameplay systems using State Machines, Flyweight and SOLID-based architecture.
- Developed and deployed Android and iOS games, focusing on cross-platform performance and optimization.

Webmoril Studios

Junior Game Developer • Full-time | Jan 2020 – Dec 2022

- Developed and optimized multiple Android and iOS games, contributing to gameplay programming, feature development and cross-platform performance.
- Implemented Photon multiplayer, REST APIs, backend communication, ads and notification systems across multiple game projects.
- Contributed to UI/UX, animation and gameplay systems, focusing on optimized multiplayer and mobile game experiences.

PROJECTS

1. [MadMax](#) - Multiplayer Shooter | Unity • Photon

- Developed a multiplayer shooting game inspired by *Mini Militia*, implementing networked gameplay using Photon.
- Worked on core gameplay systems and multiplayer interactions.

2. [Pong of Champions](#) - Multiplayer Street Fighter Pong Ball Game | Unity

- Developed a fast-paced multiplayer game featuring competitive cup battles and solo challenge modes.
- Worked on gameplay systems and multiplayer player interactions.

3. [Ballsy](#) - Physics-Based Puzzle Game | Unity

- Developed a physics-based puzzle game inspired by Angry Birds' pull-and-release mechanic.
- Implemented physics-driven gameplay and core puzzle interactions.

4. [Zard](#) — Combat Prototype , 3D Combat Prototype | Unity • Combat Design

- Developed a combat prototype exploring attacks, combos, AI, hit impact, timing windows and player-input responsiveness.
- Currently refining combo flow, animation feedback and parry mechanics.

Game Design Work

- [Echo Circuit](#) — Time-loop puzzle design built around 20-second cycles, persistent Echoes and multi-version player coordination.
- [Combat Feel GDD](#) — Combat responsiveness, hit-stop, animation anticipation, sound and impact feedback.
- [Peak End Rule](#) — Applying player psychology and the Peak-End Rule to memorable game experiences.
- [Game Design](#) & [Tutorial Design](#) — Exploring core game-design principles and methods for teaching mechanics through intuitive gameplay, player feedback and progressive learning.

Game Design Videos
